energetica
PHOTOVOLTAIC INDUSTRIES

As an independent, international solar technology company, we develop, test and produce highly efficient photovoltaic modules, which through their reliability and sustainability make their contribution to the renewable energy generation of the future.

Become part of the motivated team at our new location in Liebenfels / Carinthia and bring us closer to our goal through your commitment and specialist knowledge.

For immediate entry we are looking for a highly motivated

Process engineer

Skills and responsibilities:

- As a process engineer, you design the manufacturing processes and determine the optimal industrial process.
- You initiate feedback loops and participate in the continuous improvement of the manufacturing environment.
- You work in the responsible team on the fully automated production processes, including optimization and further development of the individual recipes, and define important parameters of the process flow and production.
- As a team, you will introduce new processes and technologies to reduce the company's total cost of ownership.
- You work with suppliers to ensure better processes and timely transfer of qualifications and to optimize the operating times of automation.
- You actively participate in key projects such as NPI / productivity / earnings / improvement in cycle times.
- You have strong analytical skills in process control.
- They are part of the team during the execution of processes, carry out root cause analyzes and solve problems on the networked Industry 4.0 systems.

Your profile:

- As a process engineer at Energetica, you have a degree in engineering in the plastics sector or have graduated from a technical college or similar training.
- You have practical experience / very good skills in error and process analysis.
- You already have 2-3 years of professional experience in manufacturing or in positions with process responsibility in the manufacturing industry, preferably in the solar / semiconductor or automation industry.
- Your high degree of persuasiveness and assertiveness enables you to work with contacts at all levels.
- Hands-on experience in the introduction and improvement of new products and processes.
- Willingness to start working in a challenging production environment.
- High self-motivation, practically oriented and able to work in a team
- Dynamic and positive attitude to work
- Very good knowledge of German and English
